Creating Your Scene

Open **Scene-Creator-Top-View.psd** then open **Top-View-items.psd**
Then just use your **Move Tool**  and place images on your scene.

Top-View-Items.psd

Please update your **Move Tool** settings, before using this file.

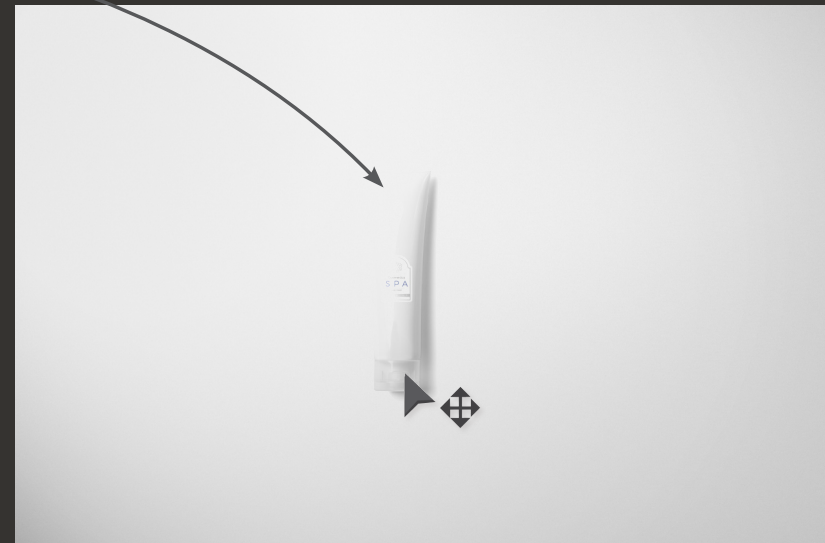

First select **Move Tool (V)** from tools menu. 

On top left corner change **Move Tool** settings
as shown on preview image.

Activate **Auto-Select** and choose **Group** from drop-down menu.

Now you can easily Drag & Drop items to **Scene-Top-View.psd**

Editing a Smart Object

After you open PSD file you will see all objects properly grouped and named.
To insert your design you need to edit **Smart Object**.

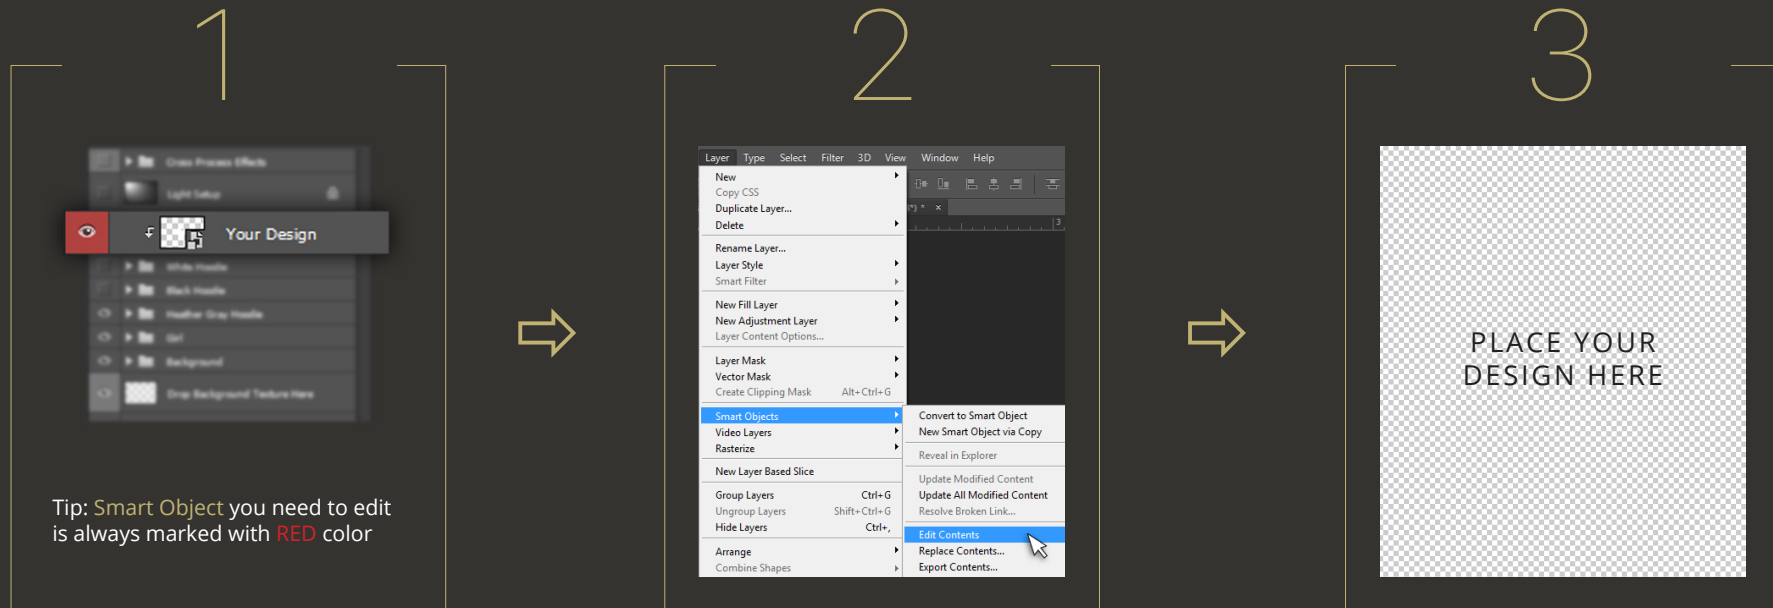

To do so, follow 3 simple steps:

1. Select the **Smart Object** from the **Layers Panel**
2. Choose **Layer > Smart Objects > Edit Contents**
3. A new blank file will open, insert your design, then choose **File > Save**

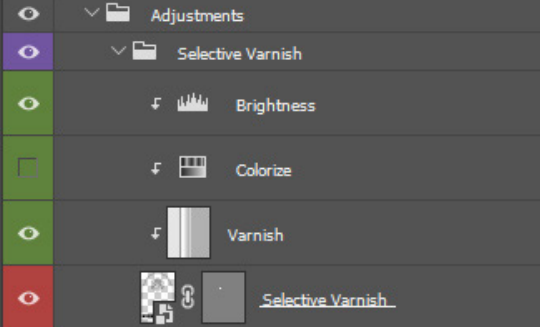

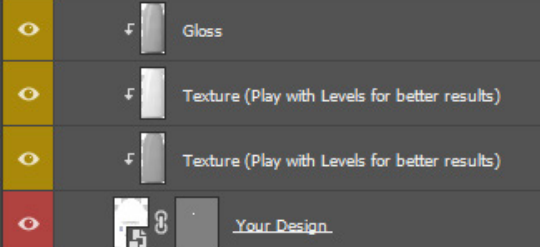

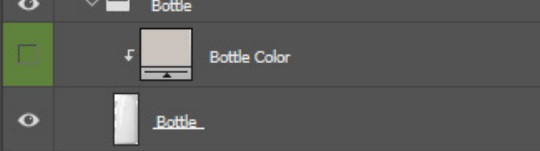

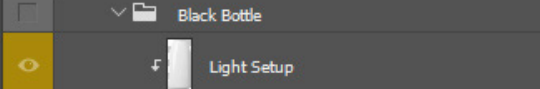

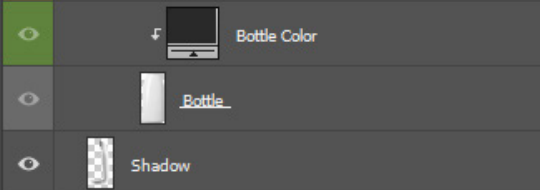

After those steps your design will appear automatically upon returning to your main psd file.

Editing the Visual Appearance of Your Scene

<p>This is your Smart Object layer that you need to edit and place your design inside container</p> <p>Edit this Smart Object layer and add selective silver or gold varnish</p>	
<p>Edit selective varnish, brightness, intensity and color</p>	
<p>Try to change this layer Transparency, Brightness/Contrast settings to achieve realistic result for your design</p>	
<p>Expand this group to change cap properties</p>	
<p>Enable and double click this layer to select items color</p>	
<p>Disable layer above and enable black item</p> <p>Try to change this layer Transparency, Brightness/Contrast settings to achieve realistic result for your design</p>	
<p>Double click this layer to select items color</p>
